Abnormal

Abnormal AI for Mergers & Acquisitions

M&A introduces risk and limits visibility.
Abnormal restores control with automation and centralized response.

The M&A Challenge

Mergers and acquisitions create email and identity chaos across multiple tenants, overlapping domains, and inherited tools. Attackers exploit this complexity through social engineering and vendor compromise.

Abnormal restores visibility and control, enabling secure integration and Day-1 protection across every acquired tenant.

Abnormal Solutions

- **Simplified Management**
  API-based Parent/Child control centralizes governance across Microsoft and Google tenants with no MX or DNS changes required.

- **Instant Risk Assessment**
  Read-only connections baseline risk in hours, surfacing exposed accounts, risky apps, and vendor dependencies through PeopleBase, AppBase, and VendorBase.

- **Accelerated Integration**
  Day-1 protection powered by behavioral AI, automated response with AI Security Mailbox, and flexible true-up licensing that streamlines post-close consolidation.

Architecture Snapshot

- **Pre-Close**
  Read-only API connection baselines risk—no disruption or mail reroute.

- **Post-Close**
  Instantly activate protection across Microsoft 365 and Google Workspace.

- **Control Plane**
  Parent/Child management with telemetry streaming to SIEM/SOAR/XDR.

Customer Impact

Accelerated Integration
Migrations complete in 4–6 weeks with ~10 hours of configuration.

Reduced SOC Workload
~96 SOC hours/week reclaimed; graymail automation saves >290 employee hours/week.

Lower Cost
Replacing legacy gateways delivers ≈42% licensing savings.
