

Maximize Microsoft 365 with Abnormal AI + SHI

Abnormal AI and SHI partner with Microsoft to help organizations improve email security, modernize security posture, and unlock greater ROI from Microsoft 365.

This unified strategy combines AI-powered threat protection with decades of Microsoft deployment expertise, built for enterprises navigating risk, complexity, and cost.

AI-Native Email Security for Microsoft 365

Abnormal + M365: Stronger Together

Native Cloud Email providers offer solid baseline protection, but struggle to keep up with the advanced, socially engineered attacks that now drive the most damage. Threats like business email compromise, vendor fraud, and internal account takeovers are designed to evade detection that relies on threat intelligence alone.

Stopping these attacks requires a fundamentally different approach—one that understands people, not just payloads.

By modeling legitimate behavior across every user, vendor, and application, Abnormal builds a dynamic understanding of how your organization communicates.

Our behavioral AI analyzes thousands of signals—including tone, timing, relationships, and intent—to detect attacks before they turn into breaches, providing complete cloud email defense.

►► Outcome

End-to-end protection across Microsoft 365 and Teams, deployed in minutes via API.

Strategic Partnership with SHI

SHI Helps You Get More from Microsoft

With over 30 years of Microsoft licensing expertise, SHI helps organizations take control of their Microsoft strategy, maximizing value while reducing complexity.

►► Outcome

Optimized licensing, reduced costs, and a Microsoft roadmap aligned to business goals.

Why Customers Choose This Partnership

SHI Value

- Dedicated security experts and success teams to help you improve your security posture.
- Cost optimization via 365 Insights and licensing models.
- Proactive renewal management—no surprises.
- Network of licensing experts.

Abnormal Value

- No-pain deployment via one-click API and Outlook-native experience.
- SOC automation for triage, remediation, and response.
- Visibility into configuration drift, risky users/apps, and threat posture.
- Defense-in-depth: Microsoft's known-bad + Abnormal's known-good detection.

Together, Abnormal and SHI:

- Deliver AI-native threat protection that complements Microsoft security.
- Optimize spend across Microsoft cloud environments.
- Eliminate complexity in both email security and licensing.
