

AI Data Analyst

Board-ready answers in minutes, recurring value reports running on autopilot for you.

Board-level attention to cybersecurity has increased for 87% of security analysts over the past year¹, and 53% of boards say reporting on emerging threats still needs improvement.² Yet manually built decks, ad hoc BI queries, and general AI assistants summarizing exported data aren't purpose-built for security, and none deliver a board-ready answer fast enough. The result is delayed insight for executives and reporting that doesn't scale as operations grow.

Abnormal provides the solution.

Answers security questions in natural language by email or portal, delivering board-ready insights grounded in your live Abnormal data.

Schedules recurring value and threat reports with smart defaults, auto-derived time periods, and simple edit and delete controls.

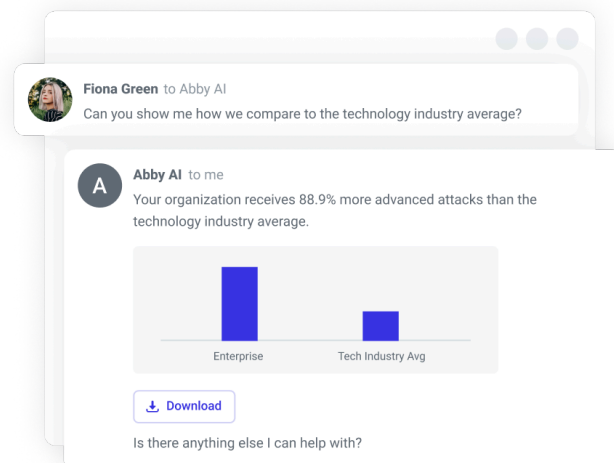

Organizes every report and conversation in a unified Report Repository, with status, tenants, and full traceability built in.

Turns any chat question into a recurring report with one click, with versioned, presentation-ready downloads on demand.

Scopes reports across any tenant or group, with recipient lists automatically validated for MSSPs and multi-tenant deployments.

The Abnormal Advantage at a Glance

Delivers AI-Powered Value Reporting

Abnormal AI Data Analyst automates the entire reporting workflow within the Abnormal platform, turning any chat question into a recurring, presentation-ready report with one click.

Offers Inbox-Native Access

Ask the Abnormal AI Data Analyst your security questions by simply sending an email—no login required and minimal setup. It's designed to provide instant insights, without the typical learning curve.

Delivers Grounded, Board-Ready AI

Unlike generic AI tools, Abnormal's agents are grounded in your live behavioral data across email and identity, so every answer is accurate, defensible, and traceable.
